- 1. Suppose we deal five cards from an ordinary 52-card deck.
 - i What is the conditional probability that all five cards are spades, given that at least four of them are spades?

$$P \text{ (All 5 are spades } | \text{ At least 4 spades)} = \frac{P \text{ (All 5 are spades)}}{P \text{ (4 spades + 1 other card)} + P \text{ (All 5 are spades)}}$$

$$= \frac{\frac{\binom{13}{5}}{\binom{52}{5}}}{\frac{\binom{13}{4}\binom{39}{1} + \binom{13}{5}}{\binom{52}{5}}}$$

$$= \frac{\binom{13}{5}}{\binom{13}{4}\binom{39}{1} + \binom{13}{5}}$$

$$= \frac{3}{68}$$

ii What is the conditional probability that the hand contains no pairs, given that it contains no spades?

P (Containing no spades) = $\frac{\binom{39}{5}}{\binom{52}{5}}$. P (Containing no pairs and no spades) means that for the first card chosen, any of 39 cards can be chosen, then for the second card, any of 36 cards can be chosen (excluding the other 3 cards that can make previous card a pair), etc. i.e. $P ext{ (Containing no pairs and no spades)} = \frac{39}{52} \cdot \frac{36}{51} \cdot \frac{33}{50} \cdot \frac{30}{49} \cdot \frac{27}{48} = \frac{8019}{66640}$ $\therefore P ext{ (Containing no pairs given no spades)} = \frac{8019}{\frac{66640}{5}} = \frac{2673}{4921}$

$$\therefore P \text{ (Containing no pairs given no spades)} = \frac{\frac{8019}{66640}}{\binom{39}{5}} = \frac{2673}{4921}$$

2. (Q6 on p.84 From B&H)

A hat contains 100 coins, where 99 are fair but one is double-headed (always landing Heads). A coin is chosen uniformly at random. The coin is flipped 7 times, and it lands Heads all 7 times. Given this information, what is the probability that the chosen coin is double-headed?

From description:
$$P$$
 (1-head coin) = $\frac{99}{100}$, P (2-head coin) = $\frac{1}{100}$, P (All heads | 1-sided coin) = $\frac{1}{2^7}$ and P (All heads | 2-head coin) = 1. Therefore, by Bayes' Theorem,
$$P$$
 (2-head coin | All heads) =
$$\frac{P$$
 (All heads | 2-head coin) P (2-head coin) P (1-head coin)
$$P$$
 (1-head coin)
$$P$$
 (1-head coin)
$$P$$
 (1-head coin)
$$P$$
 (2-head coin)
$$P$$
 (1-head coin)
